**AESTHETICS AND REASON**

items with powerful geometries that allow a magic and functional layout of the vertical space

off the shelf, personalized and custom-made products

stainless steel  
aluminium  
stone and solid wood  
fiber-reinforced composite materials  
particulate composite materials  
gold- and silver-foil covering

A form in space is moving brightness that refresh itself without end along organic or geometric unexpected paths: an instinct of continuous metamorphosis that represents the aesthetic and structural distinctive features of stainless steel, aluminium, marble and composite materials.

The composition of symmetry and asymmetry, linearity and sinuosity, harmony and disharmony is the main expressive tool in order to design a contemporary original and stimulating space.
